

CyberProof Cloud Security

The cloud opens doors for business agility and scalability, but cloud security is crucial. Data visibility, multi-tenancy environments, access management, misconfigurations and regulatory compliance all present new challenges on the cloud which need a dedicated approach. CyberProof's Cloud Security service includes 360° comprehensive coverage. This starts from strategy, consulting and architecture and continues to transformation, integration and managed security services, ensuring business continuity during and following your transformation to the cloud.

What's Included in CyberProof's Cloud Security?

Continuous Monitoring & Threat Detection

24/7 monitoring of cloud environments to detect security events, vulnerabilities, and misconfigurations in real time, with advanced threat intelligence and analytics.

Cloud Resource Protection

Identification and implementation of strong security controls, policies, and validation of cloud security.

Data Security and Compliance

Cloud Data, compliance risk assessment and implementation to protect against unauthorized access, disclosure or alteration.

Actionable Deliverables

Customized cloud security assessment and remediation roadmap, as well as vulnerability management, incident and compliance reports.

Comprehensive coverage

Experience and capabilities in CSPM/CNAPP/CWPP, Container Security, Cloud Network Security, DevSecOps/IaC, AppSec, ZTNA/SASE, IAM/CIEM, CASB, CDR and more.

Business Outcomes

Enhanced Visibility and Control

Gain deep insights into your cloud infrastructure with full visibility into workloads, applications, and user activity.

Risk mitigation

Proactively identify and reduce risk across cloud environments using advanced tools and Zero Trust.

Accelerated cloud adoption

Achieve scalable, flexible, secure and efficient cloud migration across hybrid-cloud and multi-cloud environments.

Resilient infrastructure

High availability, disaster recovery, and continuous monitoring ensures minimal downtime and business continuity.

Optimized cost management

Our tailored cloud security solutions minimize overheads and reduce the financial impact of security incidents.

Improved compliance

Automated compliance monitoring and governance frameworks to meet regulatory standards from GDPR to HIPAA and beyond.

What Makes CyberProof Unique?

Integrates with Cyberproof Threat Exposure Management (TEM)

TEM enhances cloud security posture via improved visibility, optimization of defences, and prioritization of incident response.

Vendor agnosticism

Our cloud security services are broad, with in-depth knowledge and expertise across AWS, Azure, Google Cloud, IBM, Oracle Cloud and more.

Integration and interoperability

Designed to integrate with various platforms, services and cloud infrastructure, and with specialized solutions for containers/K8s and, serverless, and K8s.

Cost-effectiveness

With a subscription-based model, organizations pay for what they need, reducing maintenance and upfront costs, and scaling as they grow.

Professional specializations

Our experts specialize in areas including data protection, network security, IAM, encryption, threat detection, incident response, and compliance.
