

Continual Assessment of Threat Exposure

CyberProof partners with Interpres to maximize risk mitigation through the continual assessment of your environment threat posture.

■ **Threat exposure management**

Continuously analyze your security defenses to identify gaps and weaknesses.

■ **Focus on effectiveness**

CyberProof's experts leverage the Interpres solution to connect to Nyrstar's security tooling, including Security Incident and Event Management (SIEM), Endpoint Detection and Response (EDR), and Vulnerability Management (VM).

This supports correlation of the threat profile with active vulnerabilities and an assessment of current detection and prevention capabilities.

■ **Prioritization and optimization**

Based on in-depth analysis, Interpres recommends prioritized actions to improve the organization's security posture and get the most out of existing security investments. These prioritized actions are added to the backlog and implemented as part of the continuous improvement process established by CyberProof.

Use cases:

Optimizing your defensive security strategy

CyberProof's experts leverage the Interpres solution to continuous validation of your defensive security strategy with capabilities that include:

Baseline threat exposure assessment

Automated analysis and prioritization of visibility, detection capability, and security tool configurations

Optimization of existing tooling

A get-well plan to optimize existing tooling to reduce threat exposure gaps and prioritize patching

Continuous threat exposure measurement

Evidence-based continuous readiness assessment showing improvement or degradation of threat exposure risk over time

Stack and product rationalization

Identifying areas of over-investment and under-investment

Automated analysis of newest threat advisories

Automated analysis of threat exposure to the latest advisories, breach reports, and threat research – enabling you to take immediate action to reduce risk. Use case framework leverages Agile methodology to provide continuous improvement by minimizing gaps between threat detection and response capability.

Elimination of draft in security controls

View of all changes in logging, detections, and security controls across your entire environment

Service provider governance

Monitoring service providers to ensure they are providing the optimal threat coverage for your business and understand the impact of changes they are making to your environment

Prioritized vulnerability intelligence

Prioritization of exploitable vulnerabilities that are being leveraged by adversaries to target organizations like yours

About CyberProof

Fortify your enterprise with cloud security transformation. CyberProof, a UST company, helps enterprises migrate to cloud-native security operations with advanced Managed Detection & Response services that allow you to protect, detect, and respond to new and existing cyber threats faster and more effectively. Our team of nation-state trained experts together with our AI virtual assistant SeeMo challenge the status quo in the cybersecurity industry with a risk-based approach that helps mitigate the potential threat to your business. Our mission is to empower your organization to anticipate, adapt, and swiftly counter cyber threats – with our global security operations centers, in-depth expertise, and a portfolio of services including Tailored Threat Intelligence, Advanced Threat Hunting, Use Case Management, and more.
