

CyberProof Data Security

CyberProof's Data Security service is a comprehensive solution designed to safeguard sensitive information for organizations. Our specialized team manages and protects data, ensuring its confidentiality, integrity, and availability. With robust security measures, we mitigate risks, detect vulnerabilities, and respond to threats, allowing businesses to focus on their core operations while entrusting their data security to our expert services.

What's Included in CyberProof's Data Security Service?

Data loss prevention (DLP)

Prevents unauthorized data transfer or leakage, mitigating risks of breaches and regulatory non-compliance.

Ransomware data protection

Secures critical data against ransomware threats through proactive detection and response mechanisms.

Data risk assessment & consulting

Identifies vulnerabilities, evaluates security posture, and provides expert recommendations for data protection.

Data security posture management (DSPM)

Ensures continuous monitoring, policy enforcement, and risk assessment for safeguarding sensitive data.

Information protection & rights management

Implements access controls, encryption, and rights management to prevent unauthorized data exposure.

Access control & data classification

Restricts unauthorized access, categorizes data by sensitivity, and defines retention and secure disposal policies.

Constant monitoring & compliance reporting

Provides continuous oversight, identifying vulnerabilities and ensuring adherence to security regulations such as ISO 27001, GDPR, and HIPAA.

Highlights

Enhanced data visibility

Gain a clear understanding of your data's location, storage, and access patterns.

Proactive risk management

Identify and address potential threats before they can impact your organization.

Regulatory compliance

Align with global data protection regulations to avoid legal and financial penalties.

Operational efficiency

Streamline data security processes, allowing your team to focus on core business activities.

Drill Down on Data Security with Microsoft Purview

CyberProof primarily leverages **Microsoft Purview** to enhance data discovery, classification, and security policy enforcement. Purview connects to various data sources, categorizes information by sensitivity, and enables organizations to set policies for data protection. While Purview is a key tool in our delivery approach, CyberProof also integrates additional technologies as needed to extend protection across both cloud and on-premises environments.

What Makes CyberProof Unique?

Tailored security solutions

Each organization has unique data security needs. CyberProof customizes strategies to align with your business objectives and compliance requirements.

Industry-leading expertise

With a team of seasoned security consultants, CyberProof delivers innovative solutions backed by industry best practices.

Flexible, tool-agnostic approach

Our service seamlessly integrates with your existing security ecosystem, ensuring efficiency and adaptability.

Continuous optimization & support

We provide ongoing security enhancements, quarterly reviews, and strategic recommendations to strengthen your data security posture.
