

Interpres Threat Exposure Management Platform

Optimize Your Defenses Against the Threats that Matter Most

In the rapidly evolving world of cybersecurity, staying ahead of emerging threats requires more than traditional defense mechanisms. Organizations cannot defend against every threat and patch every vulnerability. However, with the adoption of a threat-informed, continuous threat exposure management program, security teams are discovering this approach is a key to staying ahead of the adversarial threat landscape.

About Interpres

Interpres Security is a Threat Exposure Management Platform that enables you to rapidly determine your cyber defense readiness and ensure your defenses are optimized and ready to defend against the threats likely targeting your organization.

The Interpres platform automatically analyzes trending threat intelligence to measure asset and vulnerability exposure while simultaneously analyzing defensive readiness from a security tooling perspective. By delivering a comprehensive and continuous view of your threat exposure, you can fortify your cybersecurity defenses and stay ahead of the threats that matter most.

Key Functionality

Baseline your exposure

across threats, vulnerabilities, defensive capabilities, and assets.

Automate your threat analysis process

to determine your readiness against current and emerging the threats.

Operationalize threat intelligence

to prioritize threats and vulnerabilities and understand adversarial TTPs.

Identify gaps in your detection coverage and preventive controls

Continuously monitor for environmental and defensive tool configuration drift

For a full list features and functionality, visit [Interpres Platform Features & Benefits](#)

Benefits

**Save time. Save resources.
Reduce risk faster.**

Automate your threat team to optimize against your adversaries.

Reduce time to understand gaps in detection and preventive controls to where mitigation, detection and remediation should occur.

Prioritize exploitable vulnerabilities based your asset and vulnerability exposure and adversarial targeting.

Make threat-informed decisions and direct your resources where they matter most.

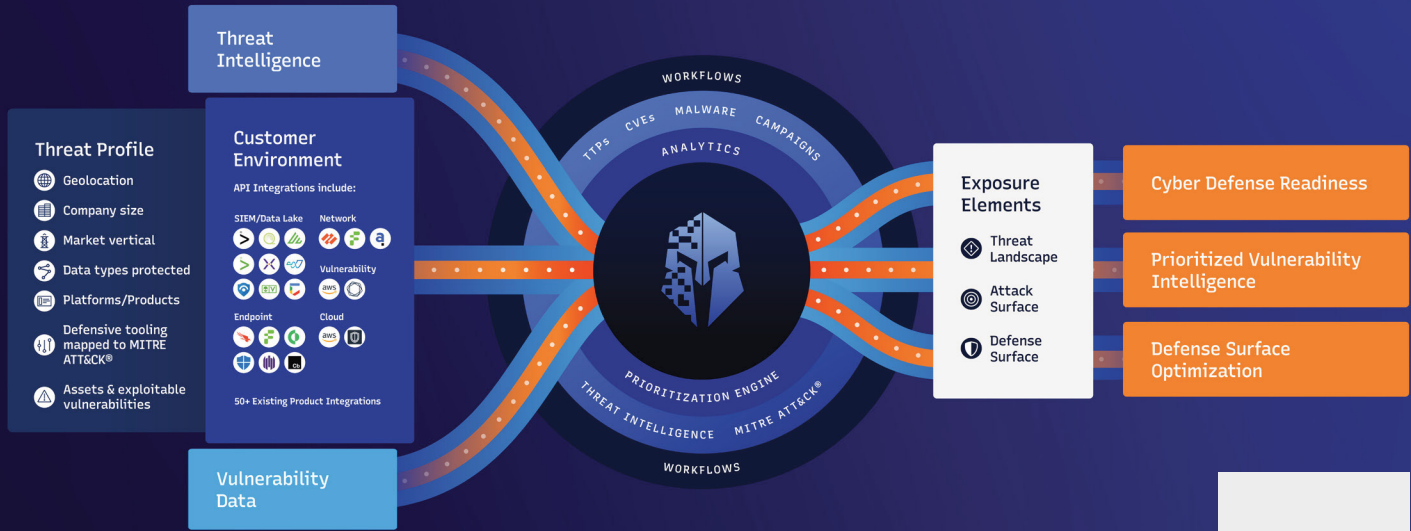

Gain continuous situational awareness of your threat exposure to increase readiness and reduce risk exposure.

How it works

Interpres automates the analysis of the interplay between threats, your security controls, and vulnerabilities to prioritize your top threats and understand your exposure.

Interpres Threat Exposure Management Platform

It starts with understanding key aspects of your organization by establishing your organization's specific threat profile(s); and setup integrations to connect to your security products through read-only APIs.

By ingesting metadata from your security tooling and operationalizing TTP-based threat intelligence, you can analyze the interplay between your defenses, threats, and vulnerabilities.

Top threats and vulnerabilities are prioritized based on trending threat intelligence and your unique threat profile.

Analytical insight gained from your attack surface to enable you to understand asset exposure and prioritize exploitable vulnerabilities.

Defensive tools readiness is determined.

Gaps in security controls and detection coverage are identified.

Monitoring for changes in detection, security log, and security tool configurations are continuous to ensure your defensive environment does not regress over time.

Interpres continuous threat exposure management solution arms you with speed, scale, and accuracy to measure and rapidly reduce risk exposure.

Platform Attributes

SaaS-based platform with support for hybrid on-prem/cloud environments

Patented, Agentless and Sensor-less

Integration via reads-only APIs

Setup < 1 hour

Operationalization of TTP-based Threat Intelligence

Automated MITRE ATT&CK® mapping and analysis

Real-time Activity Feed to track any changes that may impact your security posture.

Use Cases & Optimized Outcomes

By enabling organizations to adopt a threat-informed, continuous threat exposure management program, teams are optimizing readiness, hardening defenses, and reducing cyber threat exposure. Organizations like yours are using Interpres Security for:

Cyber Defense Readiness

Assess your defensive readiness and focus resources on the threats that matter most. Automate your threat analysis process to determine your readiness within minutes, not days.

Defense Surface Optimization

Maintain situational awareness across your environment to identify gaps in security controls and track and remediate change. Action prioritized recommendations to optimize your existing tooling and defensive security posture.

MITRE ATT&CK® Analysis

Automatically map detections and telemetry to the latest MITRE ATT&CK framework and capture an up-to-date view of your detection coverage, visibility, and identification of gaps against prioritized MITRE Techniques.

Defensive Tool Configuration Drift Detection

Monitor for changes in detection, security log, and security tool configurations to ensure your defensive ecosystem does not regress over time. Know when defensive changes occur so you can take corrective action before you miss malicious activity.

Vulnerability Prioritization

Action vulnerability intelligence to understand your asset and vulnerability exposure. Prioritize your vulnerability management and patching based on adversarial targeting and knowing what CVEs pose the greatest risk to your organization.

Get your vulnerability assessment today.

About Interpres

Interpres Security operationalizes TTP-based threat intelligence and automates defensive readiness to help CISOs and security practitioners reduce threat exposure. As a light-weight analytics engine, the Interpres platform analyzes the dynamic relationship between all defensive and adversarial capabilities, assets and their exploitable vulnerabilities, prioritizes the required defensive actions to harden defenses, and optimizes the security environment, to provide continuous threat exposure management.

To learn more about how Interpres Security can help you right-size your defensive strategy against the cyber threats that matter most, visit InterpresSecurity.com and follow the company on LinkedIn or X (formerly Twitter).
