

CyberProof Vulnerability Management

Identifying vulnerabilities in the client environment is an increasingly difficult task. Organizations have inadequate visibility into emerging threats, and struggle to safeguard critical assets ahead of time to mitigate risk. In response to these challenges, CyberProof offers its Vulnerability Management service, proactively identifying, assessing, prioritizing, and addressing vulnerabilities with regular scans and assessments that detect weaknesses in software, configurations, and network infrastructure.

What's Included in CyberProof's Vulnerability Management Service?

Asset Discovery and Inventory Management

Identification and cataloging of your digital assets for effective security and resource management, where supported by vendor.

Vulnerability Assessment

Systematically reviewing systems and networks to identify, evaluate and prioritize vulnerabilities.

Risk Analysis and Prioritization

Assessing all potential threats and vulnerabilities, prioritizing them by severity, and determining remediation.

Compliance and Reporting

Ensuring compliance with industry-specific regulations, and facilitating concise and accurate reporting.

Remediation and Patch Management

Strategically recommending all necessary remediations to vulnerabilities, including patch management.

Customized real-time dashboard

Provides an enhanced, real-time view for vulnerability management, offering more efficient and insightful monitoring capabilities.

Highlights

Proactive threat identification

Uncover and analyze vulnerabilities across the network, including phishing, credential harvesting, and external-facing threats.

Preventative intelligence

Alert security teams to potential threats, gaps, and weaknesses ahead of time, to shore up defenses proactively.

Actionable insights

Use vulnerability management data to put defense strategies in place that safeguard critical assets ahead of time.

Intelligent prioritization

No enterprise can remediate every threat. CyberProof uses prioritization from the CyberProof Vulnerability Management System to ensure material risk is mitigated first and foremost.

What Makes CyberProof Unique?

Customized risk protection

We work with your organization to build tailored policies and prioritization for vulnerability management and compliance.

Nation-state level security quality

Cyber experts around the world with years of hands-on industry experience, including offensive and defensive nation-state expertise.

Actionable and insightful reports

Access an interactive and predefined dashboard view to meet your specific business needs and ensure timely reporting and compliance.

Powerful VM workflow

We cover the whole workflow, from scanning and discovery to remediation and reporting across the whole network and infrastructure.

Customized real-time dashboard

Quickly understand security posture and focus on top-priority vulnerabilities in one centralized location, often reducing manual efforts from 8 hours to 30 minutes.
